➤ Total LEED® Accredited Professionals: 1000 +

Building a more environmentally-stable future requires two things: vision and experience. We have been advocates of sustainable design since Larry Perkins and Phil Will founded Perkins+Will in 1935, and our firm has been designing award-winning sustainable buildings ever since. Sustainability is woven through the fabric of every project - it's how we practice, and how we live.

We believe that we must examine how our projects conserve and protect our natural resources, and how they affect their builders, occupants and staff. We must also address how we operate our company, and how we demonstrate and share our leadership with our industry, clients and policy makers. To that end, we have implemented an award-winning plan, Broader Goals: The Sustainable Design Initiative Strategic Plan 2007 - 2010 across the organization to create a framework for improving design services, expanding our knowledge and expertise, and minimizing our operational impact in order to move towards a sustainable future.

As part of the plan, Perkins+Will, in 2007, became the first multi-office company to commit to the 2030 Challenge, pledging to immediately move toward designing buildings that reach carbon neutrality by 2030.

In addition to helping our clients realize sustainable environments, Perkins+Will is making sure our own facilities are environmentally-sensitive. Our Green Operations Plan establishes operational guidelines to ensure that all of our offices incorporate sustainable design features, such as efficient HVAC systems, regionally-sourced materials, open design studios, low-flow fixtures and daylight and occupancy sensors. Please visit our website to download a copy of our Broader Goals: The Sustainable Design Initiative Strategic Plan 2007 - 2010 and Green Operations Plan.

Perkins+Will's environmental conscience also extends to its membership of the U.S. Green Building Council (USGBC) and is demonstrated by its commitment to upholding the standards set by USGBC's Leadership in Energy and Environmental Design (LEED) Green Building Rating System®. Perkins+Will has more than 1000 LEED® Accredited Professionals—more than any other design firm in the world.

Perkins+Will is a partner and an advocate for the client. The measure of our success is the satisfaction of our clients and our collective contributions to the communities in which we work and live.

From the neighborhood elementary school to the Fortune 100 corporate campus to the most advanced biomedical research facility, Perkins+Will is setting worldwide standards for exceptional service and design innovation.

Below is just a sampling of the companies for whom we have been honored to work:

Atlanta City Schools  
Bank of America  
Best Buy
